

The customer you never met asked an AI first.

Whose name did it give them? A search engine gave people a list and they picked. AI gives them one answer, a name, and they ring it. There is no page two. We show you exactly what the machines say about your business, what they get wrong, and who they name instead.

THE 90-SECOND TEST

Open ChatGPT or Gemini and ask who to use for what you do, in your suburb. Read it the way a customer would: someone with a job to book and no idea you exist. That is one answer on one day; the assessment asks properly, so you know whether it holds.

MOST OF WHAT IS BROKEN IS NOT ON YOUR WEBSITE

When a machine answers a question about your business, it is mostly repeating what other people's pages say about you. Your maps listing. Your ABN record. An old directory entry. A licence register. A review profile. Your site can be immaculate and the machine still hands a customer a three-year-old address.

Six surfaces feed that answer, and your website is one of them. Content and markup work, whatever it gets called this year, works on that one. We measure all six, fix what the evidence shows, then measure again at 90 days.

And right now you cannot tell whether any of it is working. Every other line in your P&L has a before and an after. This one does not. Ask whoever handles your search or AI work: what did it look like before you started, and what does it look like now?

We are not here to replace whoever does your marketing. Keep them.

We are the diagnostic that tells them exactly where to aim, and the scoreboard that tells you whether it worked. If the machines already have you covered, we will show you that, and there is nothing for you to buy.

The AI Recommendation Assessment

- Know where the enquiries are going. Around 22 questions real buyers ask, put to ChatGPT, Gemini, Claude and Perplexity again and again, every answer counted: where you came up, where you didn't.
- Catch the machine giving out your wrong number. Every stale address, dead phone line and missing service logged verbatim, with the screenshot to prove it.
- Meet the competitor winning your jobs. Who the machines name instead of you, how often, and in what terms. Counted and dated, never guessed.
- Fixes you can start Monday. Ten changes in plain English, ordered by what matters most. No tricks, just better evidence for the machines to check.
- A 45-minute walkthrough with the person who did the work. Proof you can hand to a partner, your staff, or yourself.

How it works

01 WE ASK

The questions your buyers actually ask, put to four AI assistants again and again over several days.

02 WE COUNT

How often your name came up, what was wrong, and who was recommended instead. Counted, never guessed.

03 YOU KNOW

Ten prioritised fixes in plain English and a 45-minute walkthrough. You leave knowing exactly where you stand.

Twenty founding places - August 2026

AI Recommendation Assessment A\$990

Assessment + 90-day re-measure A\$1,490

One lost job costs more than A\$990, and for A\$1,490 we come back in 90 days and show you, side by side, what changed.

We ran it on our own business first, then on client businesses. Ask to see those reports.

Become the answer.

Screenshot-backed and dated · ask to see any finding · counts, never invented scores · run on our own business first · nothing needed from your side · delivered personally by the founder within five business days of payment.
